

Download File PDF Explore Learning Gizmo Answer Key Photosynthesis Lab Book

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Photosynthesis Lab Answer Key

Vocabulary: carbon dioxide, chlorophyll, glucose, limiting factor, manometer, photosynthesis, wavelength

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)
(Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.)

- To survive, what gas do we need to breathe in? **Oxygen**
- Where is this gas produced? **in plants**

Gizmo Warm-up
During **photosynthesis**, plants use the energy of light to produce **glucose** ($C_6H_{12}O_6$) from **carbon dioxide** (CO_2) and water (H_2O). Glucose is a simple sugar that plants use for energy and as a building block for larger molecules.

A by-product of photosynthesis is oxygen. Plants use some of the oxygen they produce, but most of it is released. In the **Photosynthesis Lab Gizmo™**, you can monitor the rate of photosynthesis by measuring oxygen production.

- Observe the left pane closely. What do you think the **bubbles** are? **Oxygen**
- Select the **BAR CHART** tab. On the graph, notice the **Oxygen production** bar. Move the **Light intensity** slider back and forth. How does light intensity affect oxygen production?
Up to 40%, increasing the light intensity increases the oxygen production. Beyond 40% there is no effect.
- Experiment with the vertical **Temperature** slider (upper left) and the **CO₂ level** slider.
 - How does temperature affect oxygen production?
Oxygen production is maximized around 25°C. Oxygen production goes down when temperature is too hot or too cold.
 - How does CO₂ level affect oxygen production?
Up to about 200–400 ppm, increasing CO₂ production increases oxygen production. Beyond about 400 ppm, there is no change in oxygen production as CO₂ level is increased.
 - How does oxygen production relate to the rate of photosynthesis?
A greater rate of oxygen corresponds to a higher rate of photosynthesis.
